Welcome to **LexFlow**, an interactive, single-file workspace designed for Greek exegesis, thought-flow analysis, and structural diagramming of New Testament passages.

⚠️ Important Disclaimer: Verify All Morphological Data

While LexFlow utilizes dynamic morphological parsing rules and integrates data from the **SRGNT (Standard Restoration Greek New Testament)** dataset, **some morphological parsing descriptions, grammatical tags, or word definitions may occasionally be imprecise or inaccurate.**

LexFlow is built to serve as an interactive visual study aid and workspace. **Always double-check critical grammatical tags, lexical definitions, and syntactic interpretations** using authoritative print or digital reference resources (such as *BDAG*, *Liddell-Scott-Jones*, *Wallace's Greek Grammar Beyond the Basics*, or dedicated lexicon software).

Table of Contents

1. Overview & Features
2. Getting Started
3. Passage & Manuscript Tools
4. Thought Flow Diagramming
5. Text Formatting & Selection Controls
6. Greek Interlinear Lightbox
7. Exegetical Clause Notes & Master Document
8. Project Management & File Portability

1. Overview & Features

LexFlow enables pastors and students to visually break down Greek and English texts into structured thought-flow diagrams. Key features include:

- **Indentation & Subordination:** Create visual hierarchies of main and subordinate clauses with seamless vertical subordination lines.
- **Semantic Connection Labels:** Assign discourse relationships (e.g., *Causal, Purpose, Result, Conditional*) to subordinate clauses.
- **Dynamic Greek Interlinear Lightbox:** Inspect Koine Greek terms, Strong's numbers, lemmas, and plain-English grammatical breakdowns word-by-word.

- **SRGNT Collation Integration:** Access manuscript collation tools directly within the workspace.
- **Dual-Layer Exegetical Notes:** Take detailed, image-supported notes per clause, then compile them into a unified Master Exegetical Document.
- **Local Data Sovereignty:** Save multiple projects in your browser's local storage, export full workspace backups to JSON, or generate PDF summaries.

2. Getting Started

1. **Launch the Workspace:** Open your single `index.html` file in any modern web browser (Chrome, Safari, Edge, or Firefox). No server installation or build steps are required.
2. **Set Light or Dark Mode:** Toggle between light and dark themes using the **Sun/Moon** icon in the top header.
3. **Workspace Layout:**
    - **Top Header:** Passage reference entry, tool buttons, theme toggle, and PDF export.
    - **Project Bar:** Project switching, creation, backup export/import, and deletion controls.
    - **Main Editor Canvas:** The central block-based editor where you type, edit, and organize clause lines.

3. Passage & Manuscript Tools

Setting a Passage Reference

1. Enter your passage in the **Passage Input Field** in the header (e.g., `Hebrews 1:1-4`, `John 1:1-5`, `Romans 8:1-11`).
2. Click **Load** (or press Enter).
3. LexFlow will automatically fetch the dataset for the requested book and map verse numbers across your editor clauses.

Smart Auto Verses

Click the **Auto Verses** button in the header to intelligently scan your clause text and assign verse numbers across the lines.

IMPORTANT!: ***check verse numbers to ensure they are correct. Computer generated auto-numbering system is not always accurate. Verse numbers can be manually input by pressing on the verse number icon and typing in the number.***

SRGNT Collation Tool

Click **SRGNT Collation** in the top header to open an embedded modal containing manuscript collation views from the *Center for New Testament Restoration*.

4. Thought Flow Diagramming

Clause Line Controls

- **Indent Line (`Tab` or `Indent →`):** Shifts the active clause rightward, turning it into a subordinate clause with a continuous vertical subordination line.
- **Outdent Line (`Shift + Tab` or `← Outdent`):** Moves the clause leftward toward the main line.
- **Attach to Clause Below (`↓ Attach`):** Adds a dashed connecting line and arrow pointing down to indicate direct syntactic attachment to the following clause.
- **Verse Badges (`v1`, `v2`, etc.):** Shows the associated verse. Click any verse badge to manually override its assigned verse number.

Assigning Discourse Relationships

When a line is indented or attached, a **Relation Dropdown** appears on the overlay:

1. Select a pre-built discourse relationship (*Causal, Conditional, Result, Purpose, Means, Temporal, Adversative, Explanation*).
2. Or choose **+ Custom Label...** to create and store your own custom-styled relational tag.
3. Use the **Palette Icon** to pick custom color pairings for your tags.

5. Text Formatting & Selection Controls

Highlighting any text within your thought-flow document brings up the floating formatting toolbar:

Formattin	Icon / Button	Action
Color Highlights	Yellow, Green, Blue, Pink, Purple circles	Applies styled text highlighting.

Single Underline	`U`	Adds a solid single underline.
Double Underline	U	Adds a double underline for emphasis.
Strikethrough	`ab`	Strikes through selected text.
Ellipsis & Caret	`...^`	Replaces or wraps text in bracketed ellipsis notation (`...text^`) for supplied words.
Eraser	Eraser icon	Clears inline formatting from selection.

6. Greek Interlinear Lightbox

Click the **`Gk`** button on the right side of any clause overlay to open the **Greek Interlinear Lightbox**:

1. **Word-by-Word Inspection:** Step through the underlying Greek words using **Prev** and **Next**.
2. **Grammar & Meaning Tab:** Views the term's lemma, Strong's number, raw morph code, and plain-English syntactic breakdown.
3. **Related Passages Tab:** Displays other occurrences of the active lemma across the New Testament dataset.
4. **Translations Tab:** Compares standard English translation renderings.
5. **Lexicon Link:** Click **Lexicon** to open the specific Strong's entry on *Bible Hub*.
6. **Copy to Notes:** Click **Copy** to automatically insert a formatted word-study snippet directly into that clause's exegetical notes.

7. Exegetical Clause Notes & Master Document

Clause Notes Drawer

- Click the **Pen / File Lines** icon on any clause to open its individual **Exegetical Clause Notes Drawer**.
- Use the rich text toolbar to add bold, italics, lists, or paste images (`PNG/JPEG`) directly into the note editor.

Master Exegetical Document

- Click **Notes** in the top header to open the **Master Notes Drawer**.

- Click **Import All Notes** to scan all clause lines in your current project and compile their notes, clause previews, and structural levels into a single cohesive document.
- Export your compiled study to PDF via **Export PDF**.

8. Project Management & File Portability

All work is automatically saved in your browser's local storage as you type.

- **Switch Projects:** Select any project from the **Project** dropdown in the top bar.
- **Save As New:** Click **+ Save As New** to save your current thought flow under a new title.
- **Export Backup:** Click **Export** to save all your projects into a single `.json` file for backup or transfer.
- **Import Backup:** Click **Import** to select a previously saved `.json` file and restore your project library.
- **Delete Project:** Click **Delete** to permanently remove the active project.
